

# Recycled Plastic News

*Pictured below are some examples of recycled plastic products recently installed around Australia.*

Industrial & Domestic Plastic Waste Used As A Resource

## East Gippsland Rail Trails

Pictured above are three new Lyrebird recycled plastic picnic settings which have recently been installed along the East Gippsland Rail Trail (EGRT). The settings were kindly donated by members of the Friends of the EGRT Association, with the selected locations displaying a definite self interest component - they are all preferred stopping points used by the members when they ride from Bairnsdale to Orbost and want to pause for a cuppa!

The first picture shows a setting that is located near the Nicholson River Bridge. The area to the side of the trail is now a rehabilitation project for some remnant temperate rain forest. It's a high traffic location with plenty of cyclists stopping by to enjoy the great views of the river.

New visitors are always welcome to ride the trail. It's a two-day cycle for those wanting to enjoy the ambience, but the 100 km one-way trip can be done in a day for those in a hurry.

## Davey's Bay Yacht Club

The club is located off Davey's Bay Road, Mt. Eliza, Victoria, Australia and is accessed by a short walk along the cliff top. It faces north and features a fantastic view of the city of Melbourne on the opposite side of Port Philip Bay. The jetty itself can't be seen from the road – it's tucked away, not far from the bottom of Oliver's Hill.

The yacht club members chose recycled jetty planks for their new jetty because the planks will last many years under extreme coastal conditions. While wooden products usually need to be replaced every five to seven years, recycled jetty planks have shown no signs of wear after 10 years.

# Dog Agility Tracks

Dubbo City Council have recently installed an agility track especially for man's best friend. All pieces have been designed to provide a good workout for both the dog and the handler. Plenty of other varied layouts are available to suit your area and budget.

## Home use for recycled plastic

Clubhouse decking

The owners of this ten-acre property have used recycled plastic decking, bollards and planking, retaining walls and even signage extensively throughout the estate and are delighted with the results. 'Recycled plastic is more sustainable than wooden products and require no staining or lacquering,' they explained. 'It's saved us heaps of time and money!'. Over 100 metres of recycled planking have been installed, creating paths, decked areas and feature entrances to different parts of the garden.

Raised Walkways

125mm bollards & planking

150mm bollards & planking

Profiles for retaining walls

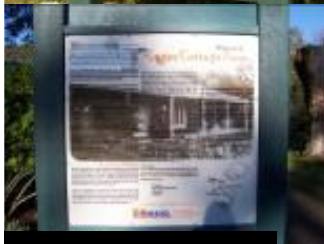

Paddle Signage

Many councils and schools are now choosing recycled plastic products for their community noticeboards. Built from the same strong durable materials as our other products, they provide easy access for information that is updated frequently. The noticeboards have a lockable clear opening door and a backing board of recycled rubber, a surface which is easy to pin notices to.

Recycled plastic notice boards are very flexible in their design. Wording or logos can be routed into the top fascia board or plaques can be mounted. The bottom board and even the posts can also have symbols, text or logos applied. Graphics or other messages can also be displayed on the back of the notice board.

Enquire today about a notice board which can be custom made to suit your requirements.
