

# Recycled Plastic Seats

All the seats illustrated are made from recycled plastic diverted from landfill. The material is low maintenance, long lasting and extremely strong. Graffiti is readily removed in the early stages using conventional cleaning materials.

The color is built in and no painting is required. The material will not split, rot, be affected by insects, including white ants, or splinter. The initial cost compares very favourably with alternatives made in steel, aluminium or timber.

Most of the pictured seats come in both free standing or in the ground designs. The colors available are Green, Blue and Grey. Legs are available in black or green. Sizes available are 1.1m and 1.8m in length\*

*\*Modification to seating can be done allowing for longer seats.*

Daintree seat

Kakadu seat

Kingfisher Seat

Kimberley Seat

Beachcomber Seat

Shaped Seat
