

Recycled Plastic Sheets/Panels

The various textures available

Introducing Replas' multi-purpose Recycled Sheeting – solid plastic sheets conveniently sized at 2400x1200mm and currently available in 7, 9, 12, 15, 19, 25, 32 and 40mm thicknesses and in a range of colours and surface finishes.

Unlike timber-based sheets or panels, Replas' durable recycled-plastic Sheeting will not rot, crack, swell, delaminate, mildew or be attacked by termites. They will last for many years outdoors, even after continuous contact with water, and will even resist damage from corrosive chemicals that would destroy most metal panels.

Replas' Sheeting is ideal for a huge range of applications across numerous industries including agriculture, aquaculture, building and construction, chemical, equine, manufacturing, marine, materials handling, signage and transport. The panels can easily be sawn, routed, drilled, machined and heat-welded using specialised plastic welding equipment.
