A TREX® TRANSFORMATION

As the weather becomes warmer, the students at Cairns State High School have a newly installed Trex® deck to enjoy!

Previously having a paved surface—the administration wanted a new product that would not only look good in this specific surrounding, but would also give them the durability and long lasting quality they've been looking for.

“This space has provided a beautiful environment for our school community to enjoy,” explains Katrina Clarke, the Business Services Manager of Facilities at Cairns State High. “It has been transformed from a paved surface to a relaxing oasis.” Another amazing fit-for-purpose Trex® installation in beautiful Queensland.

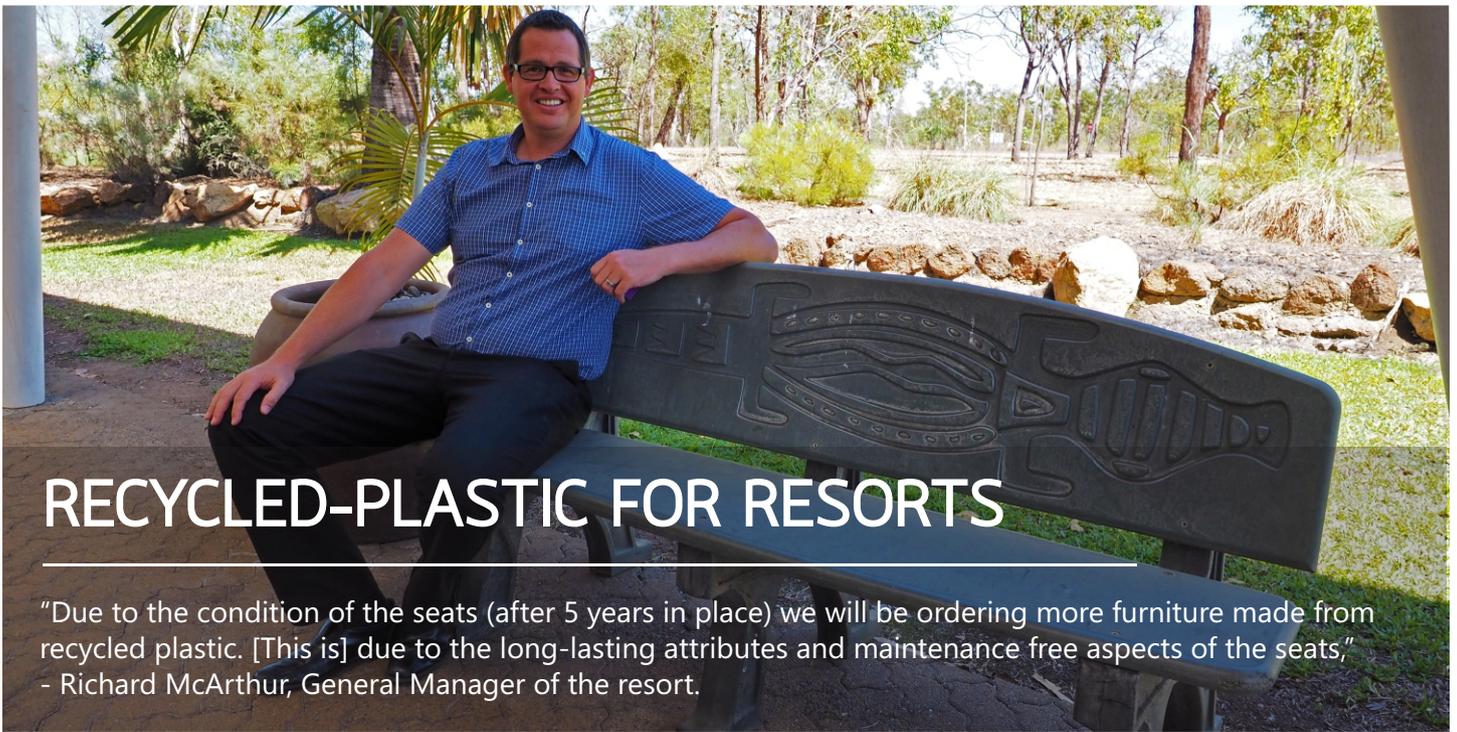

HOT SPRINGS PLASTIC UPGRADE

The township of Katherine in Northern Territory have their own little ‘hot springs’ to relax in. Tucked away in the Katherine River bed, at the top entry, are several Replas products including bollards and a fitness trail since 2016.

Mayor Fay Miller said, “the Katherine Council is committed to using, where possible, recycled plastic products. And is proud that the upcoming new upgrade for the hot springs has recycled products already in place.”

Replas is overjoyed to be included on the beautifying of these hot springs and using Australia’s recycled plastic waste to create such products.

RECYCLED-PLASTIC FOR RESORTS

"Due to the condition of the seats (after 5 years in place) we will be ordering more furniture made from recycled plastic. [This is] due to the long-lasting attributes and maintenance free aspects of the seats,"
- Richard McArthur, General Manager of the resort.

Mercure Kakadu Crocodile Hotel is one distinctive hotel, being shaped to represent Kakadu's most famous inhabitant, the saltwater crocodile. Around this uniquely shaped hotel lies several hundred-recycled plastic 125 mm green bollards and custom Replas Beachcombers all in great condition considering the consistent harsh weather.

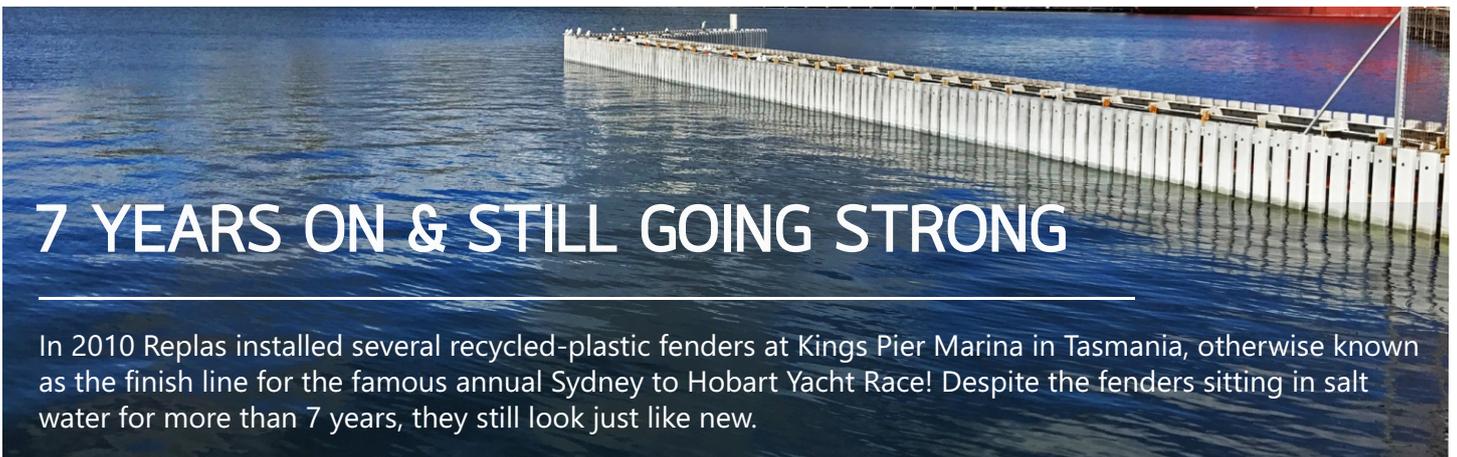

A WINNING DECK SOLUTION

New South Wales Sport and Recreation at Point Wolstoncroft have replaced a timber boat ramp with recycled plastic Enduroplank™. The ramp needed to be very durable and as maintenance free as possible due to the water environment.

"These products are easy to work with and great to see plastic waste being used," says Mitch Hawthorn and Brendon Carmody from Craig Clark Building Services. "We didn't need a crane to lift in the items, composite beams and Enduroplank™ was easily carried.

Terrific to work with such a durable product and knowing it will be here in many years," Mitch and Brendon agreed.

7 YEARS ON & STILL GOING STRONG

In 2010 Replas installed several recycled-plastic fenders at Kings Pier Marina in Tasmania, otherwise known as the finish line for the famous annual Sydney to Hobart Yacht Race! Despite the fenders sitting in salt water for more than 7 years, they still look just like new.
