As winter approaches, Replas demonstrates just how durable, safe, and long lasting their quality products are.

## A Perfect Plastic Solution

The community of Urunga has a new and improved boardwalk that will not only impress in looks, but is more durable and reliable than the rotted hardwood decking that was once there.

Amazed by Enduroplank™, the Soil Conservation Service of NSW has installed a 150 m elevated boardwalk.

The Project Manager of Urunga Wetlands Remediation, Clayton Colmer, has explained the many ways Replas services and products won him over.

*'It was 100% recycled from all those annoying plastic film bags that no one knows what to do with, a perfect solution in my mind,'* explains Clayton.

*'[Finally], I liked the strength, versatility and how easy it was for the tradies to work with, they adapted to it quickly.'*

Between the sleek and modern look of the material to the engineering perspective having 'durability, being plastic', Enduroplank™ ticks all the boxes.

While also diverting over 2.4 million bags from landfill, the community of Urunga could not be happier with their choice.

## A Serene Setting

Paul and Lisa Margate have assembled and put into place their new 1.8 m free standing Premier Setting at their home in Lysterfield South.

*'We are particularly pleased that we were able to find an attractive outdoor setting that is made entirely from recycled plastic, therefore doing the environment a big favour as well as fulfilling its design purpose,'* they explain. *'The fact that it requires basically no maintenance is another added bonus.'*

They are thrilled with their new Premier Setting, fitting in beautifully as if it was designed specifically for their picturesque home in Victoria.

## Beaming For Brolga's

Mount Alexander Shire Council in Central Victoria have recently installed new Brolga Bollard and Trackmarker signs for their trails. With a community that is passionate and knowledgeable about sustainability and the environment, they took action.

*'Knowing we have reduced our impact on the environment is in line with Mount Alexander Shire Councils goals,' explains Capital Works Coordinator Casey Hearps. 'Our contractors had no issues installing the product and [we] intend to roll them out through our trail network in the future.'*

Replas went above and beyond for this urgent order, having the product ordered and delivered within 24 hours!

## Bollard Upgrade in Bulleen

Replas Pro Melbourne Chain Wire Fencing have replaced old timber bollards and rail fencing that have become very worn at Bulleen Park.

As recycled-plastic bollards are lighter than timber bollards, a noticeable amount of time was saved during the installation process.

Drew Smith of Melbourne Chain Wire Fencing explains, *'We were impressed at how good the job looked when completed.'*

*The black bollards & railing look quite striking and make the oval look neat and well maintained. We are keen to use Replas products again, especially as we can recommend them as a product that is long lasting with a 40 year guarantee compared to the 10-year lifespan of similar timber products'*

## Access For All Thanks to Shellharbour Council

Shellharbour Council in New South Wales recently installed a Beach Access made from Enduroplank™ adjacent to the surf club on Junction Road.

The council wanted a recycled-plastic product that has the durability and long-lasting effect for their beach goers. This also gives the general public beach access including those confined to wheel chairs and mums with prams.

Councils Alan Dekker says, *'we are very happy with the result and also with the little maintenance required.'*

This Beach Access is 40 m x 2.4 m and contains the equivalent of a staggering 720,000 plastic bags!
