

Recycled Plastic News

February 2013

1800 REPLAS
www.replas.com.au

Would you rather spend your summer oiling your pool deck, or lying on it? With an Enduroplank™ deck you can kiss maintenance goodbye and say hello to relaxation.

All decked out

Bungalow Bay Koala Village is an architecturally designed holiday village on Magnetic Island in Far North Queensland .

Village owners and management strive to be eco-friendly and when an old timber deck around the pool needed replacing they were quite excited about the prospect of a new recycled-plastic deck.

Michael Terkelsen from Lifestyled Landscapes, who installed the deck, said, *'the Replas product will be much better around the wet pool environment,'* adding that installation of the Enduroplank™ on a composite fibre sub-structure was straightforward. Michael said the product addressed issues that other products could not and he, *'would definitely recommend the use of this material to future customers'.*

Miles better

In 2011, Great Lakes Council in NSW, created beach access at the south end of One Mile Beach, Forster, using a combination of Replas' Enduromesh, composite fibre and hardwood timber. A beach shower was also added.

While this proved extremely popular, increased use created a mud patch around the shower. No problem. The council simply extended the Enduromesh. Now the grass is growing back and visitors have clean feet!

Parks Victoria sign off in style

Parks Victoria asked Replas to produce a range of signage to complement the beautiful natural parklands of Westerfolds Park in Templestowe, Victoria.

The Plank Signs and Trackmarker Signs are created within the Parks Victoria style guide and will provide a maintenance free and long lasting solution for more than 40 years.

On the fence

The Department of Transport, Energy and Infrastructure (DPTI) in South Australia needed a long lasting, inexpensive fencing option for a bike path along the \$291 m Seaford rail extension. They wanted an environmentally-friendly product as the brief was to be as sustainable as possible.

The solution? A Post and Rail fence from Replas. Installed by Bluedog fences, Andy Holmes said the council were very happy with the finished project and, 'would definitely use the product again'.

Sorell Council in Tasmania, believe strongly in the 'spend once' principal. Initial expense is far outweighed by the savings made over the life cycle of a product. This is probably why they are continued supporters of Replas products.

A new recycled-plastic picket fence at the Sorell Cemetery not only looks great, but will provide a virtually maintenance free solution for more than forty years.

Any reserves on fitness?

The latest addition to the Morris Williams Reserve in Bulleen, Victoria, is a range of outdoor fitness equipment from Replas. Manningham Council, who installed the equipment, found the process easy and the result now greatly adds to the amenity of the reserve.

Outdoor exercise equipment provides an opportunity for self-guided exercise and is a lasting investment for the reserve. The equipment, constructed from recycled plastic, is not only safe and hygienic, but with no moving parts requires minimal on-going maintenance.

REPLAS—PROUDLY AUSTRALIAN MADE AND OWNED
