

# Curved Enduroplank Specifications

It's easy to construct an attractive curved boardwalk from recycled-plastic Enduroplank™ decking thanks to Replas' clever tapered planks.

The tapered planks come with a grooved non-slip finish and are available in pre-cut lengths up to 3.6 metres which can be cut to size. Fine tuning around curves can be achieved by adjusting the 5 mm gaps between the planks. Straight planks can be interspersed between the curves to change the diameter of the boardwalk.

The table below demonstrates the curves that can be achieved. It also allows designers to calculate the correct number of tapered planks required for their boardwalk.

Visit our [website](#) to view a video which demonstrates how to cut the planks. For further information about curved boardwalks made from weather proof recycled-plastic Enduroplank™, please contact your local Replas distributor.

The following calculations are based on a plank being ripped on both sides from 195 mm down to 116.5 with a 5 mm gap between the boards.

Board length (metres)	Angle of cut (degrees)	Radius inner (metres)	Radius outer (metres)	Number of boards
